

## High-tech Radiographic 3D Imaging Cone Beam CT Scan (CBCT)

This technology is fast, accurate and can reconstruct the 3D surface geography and sub-surface topography of the oral – dental structures to sub-millimetre details. This 3D imaging is essential for detecting silent diseases, assisting treatments including dental implants, root canal, extraction of wisdom teeth and other oral surgeries, orthodontics and many other applications.

**Illawarra Dental Centre is equipped with one the best CBCTs. The Sirona (German) Orthophos SL with latest imaging and implant planning software gives our patients the 3D radiography with quality. The fees for CBCTs are health fund rebatable.**
